**Looking  
down my  
microscope  
I noticed  
many  
wonderful  
patterns  
hidden  
within the  
human  
body!**

Even the nasty stuff that makes us sick came in awesome patterns

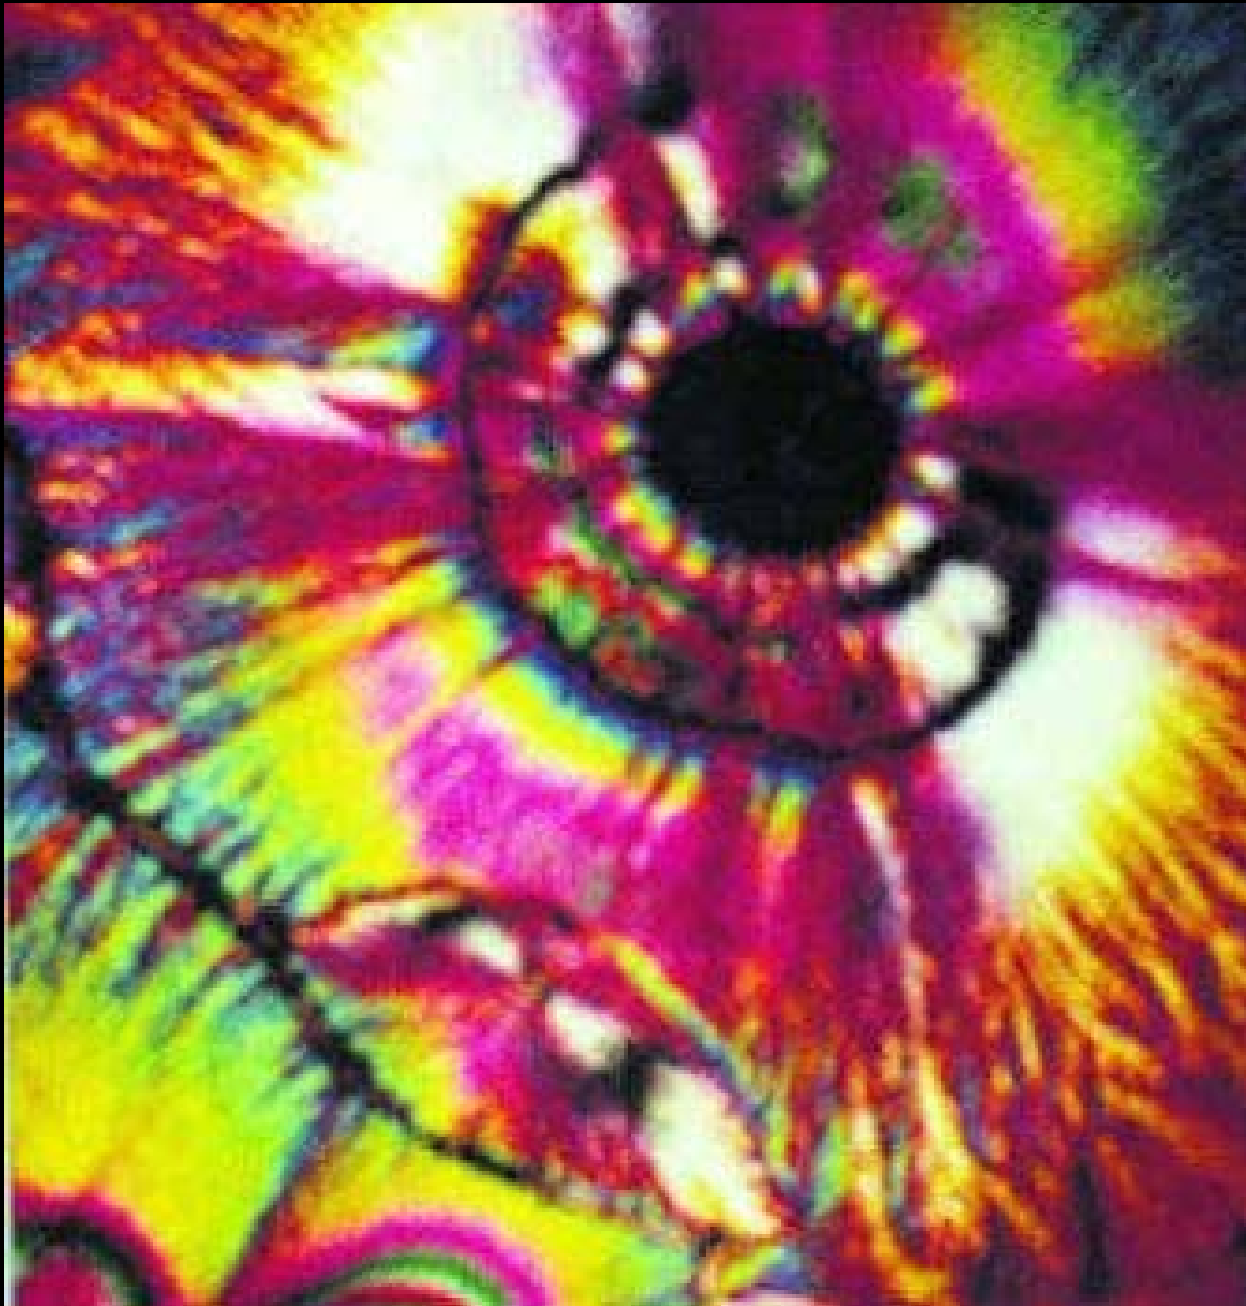

Swine Flu Virus

Then one day in the laboratory, I made a brilliant discovery!

My icecream dripped onto the microscope slide...so I took a look...

And there  
another  
beautiful  
pattern

So I went looking  
outside - I found  
more patterns...  
This is Sand

But when I put  
Sand under  
the  
microscope I  
discovered yet  
another  
pattern!

So I realised I needed to get out more and I examined Space, and was blown away by the patterns of the galaxies

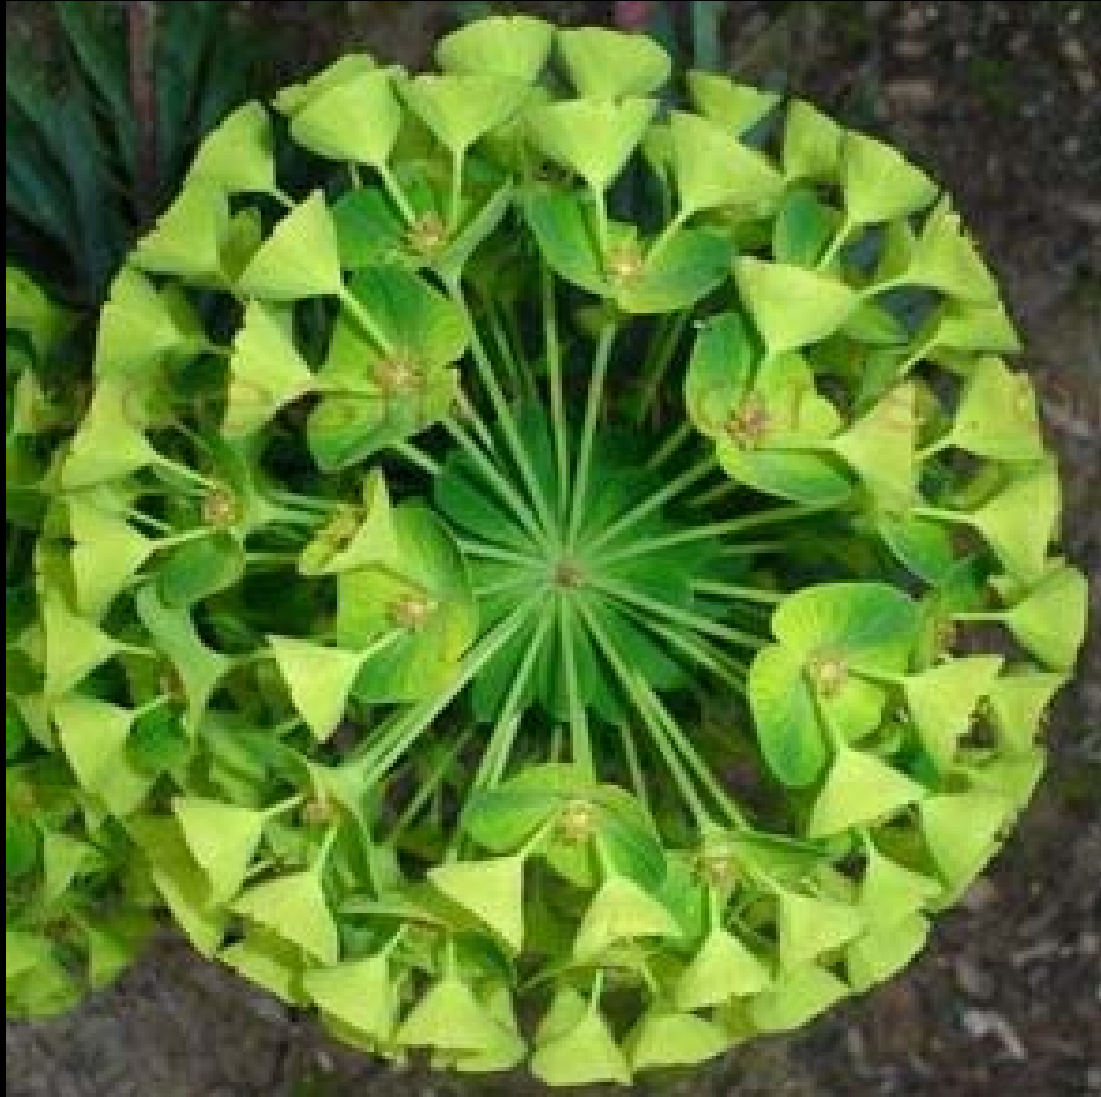

Looking  
down from  
space I saw  
water in a  
cloud  
pattern  
which fell to  
earth as  
dew and  
formed....

Yet another pattern.

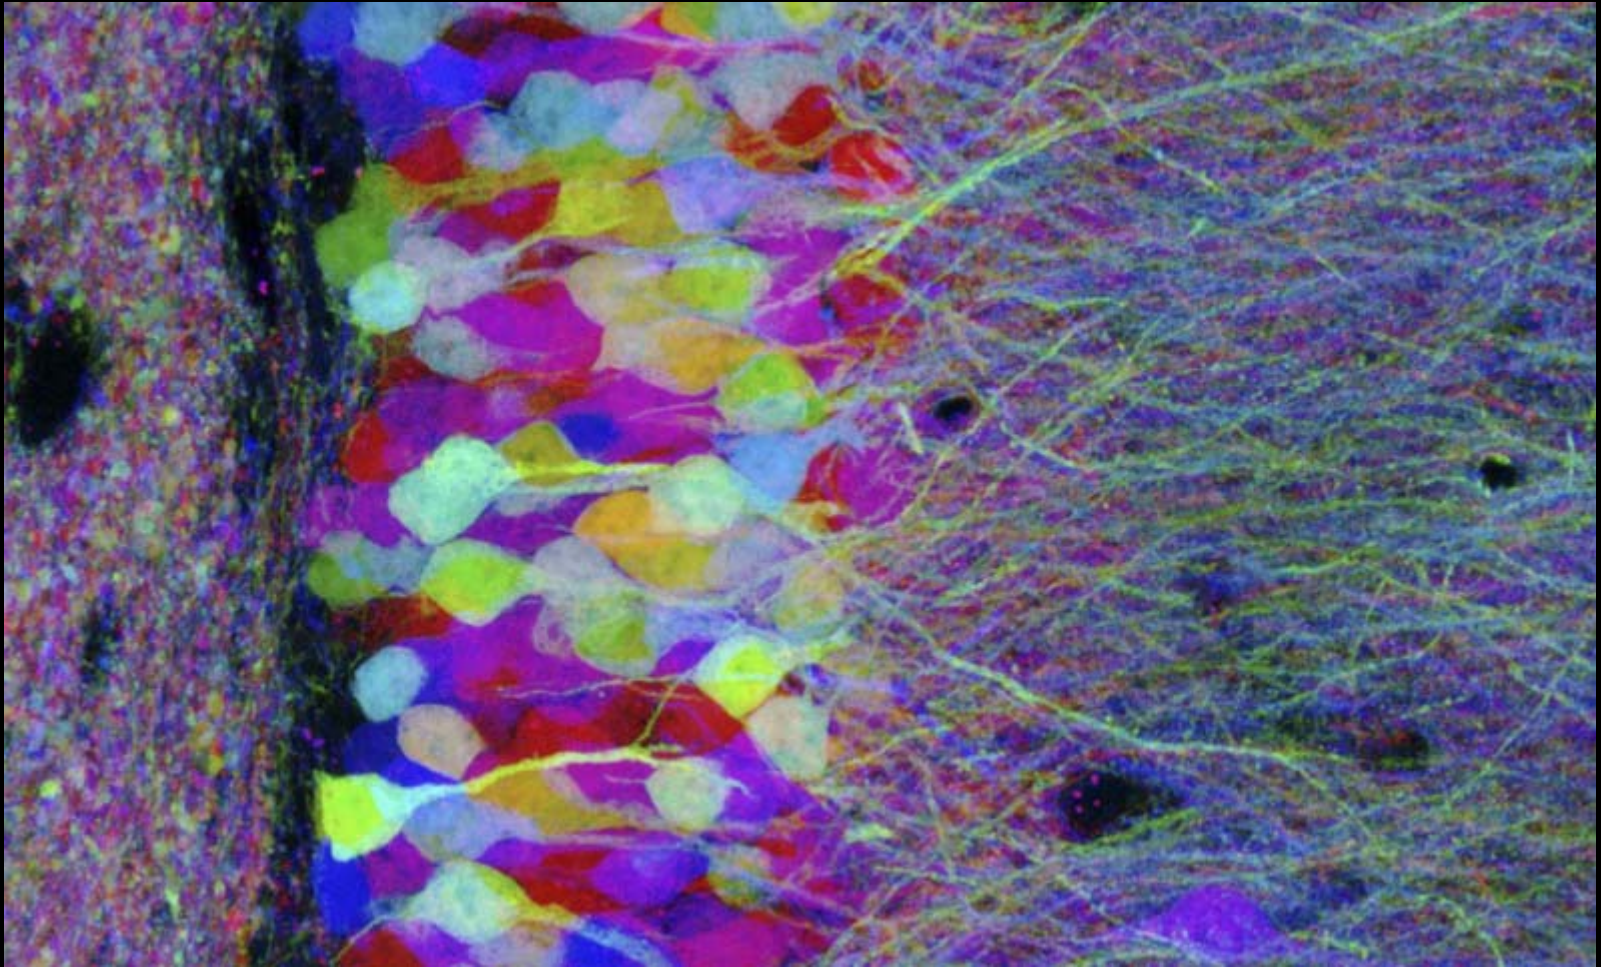

Patterns in  
plants

And in animals

Even in the brain of our little lab mouse!

So I am off on more  
adventures to find more  
patterns in the world...

from,

Professor Pattern
